

InDIAGO 510 is a motorised lifting system that is lowered in a curved movement to the front of the work surface. The movement can be stopped at any height.

The lift does not make the cabinet protrude further from the wall and it does not take up much space in the cabinet. It is easily mounted in existing or new cabinets without the base of the cabinet having to be removed. Strip lighting and light ramps are not affected by the lift since the base of the cabinet is left intact.

The system also includes a function that automatically opens the doors when the unit is lowered. When the unit goes back into the cabinet, it slows down at the end so the doors are closed gently. The ingenious design also makes it possible to open the doors as usual when the unit is in the raised position.

The cabinet unit is available in two heights that fit 70 cm or 85 cm high cabinets. The lift is available in two different depths and in a wide range of widths to fit cabinets that are 50-100 cm wide.

The lift can be integrated in kitchens from any kitchen manufacturer.

It is easy to reach the contents since the unit comes forward when lowered. The mechanics and motors are barely visible when the frame is lowered.

There is plenty of room for the mixer tap and other objects on the worktop when the frame is in the lowered position.

The mechanics and motors are optimally positioned so as to take up as little space as possible inside the cabinet.

Variations of this product

**Wall Cabinet Lift InDIAGO 510KA - 66
cm height, 26 cm depth**

**Wall Cabinet Lift InDIAGO 510SA - 81
cm height, 26 cm depth**
